Dry Shortgrass Prairie Mix

A mix based on a variety of “poor-soil” communities including dry sand prairies, oak barrens and pine barrens. While big bluestem and Indian grass would typically be an important component of such prairies, and can certainly be added, this mix is designed to be low-profile so most plants won’t exceed four feet in height. This mix is appropriate for drier soils.

Total Seeding Rate: 32.5 lbs per acre
