## Dry Shortgrass Prairie Mix

A mix based on a variety of "poor-soil" communities including dry sand prairies, oak barrens and pine barrens. This mix is designed to be low-profile so most plants won't exceed four feet in height. Big bluestem and Indian grass would typically be important components of such prairies, and could be added. This mix is appropriate for drier soils.

Total Seeding Rate: 32.75 lbs per acre  
 4.75 lbs grasses • 3 lbs forbs • 25 lbs nurse crop  
 62 native seeds per sq ft
